TECHNICAL SKILLS

HPC & Scientific Computing

C++17/20 · CUDA · Kokkos · CMake

Performance Profiling · MPI · OpenMP

Infrastructure & Platform

Kubernetes (K3s) · Docker · Ceph

Proxmox VE · VyOS · Ansible · Traefik

Linux / Debian

CI/CD & DevOps

GitLab CI/CD · Jenkins · GitHub Actions

Debian Packaging · Git

Languages

C++ · Python · TypeScript · Java · Bash

Learning: Rust · Go

Data & Backend

PostgreSQL · MySQL · JSON/XML/XSD

Docs

ℒ_AT_EX · Typst

LANGUAGES

FrenchNative

EnglishC1 — TOEIC 970/990

CERTIFICATIONS

TOEIC C1 — 970/990

ETS · October 2025

INTERESTS

Flight Simulation (DCS World, KSP, VR)

3D & VFX · Music · Self-hosting

PROFILE

Research software engineer in high-performance computing, trained through a work-study program: three years at EDF R&D on the platform that simulates the group’s nuclear reactor cores, including a research stay at Oak Ridge National Laboratory (USA), where I built GPU energy measurement tools for Kokkos, tested them on Frontier and submitted them upstream through public code review. I care about the engineering that makes research code trustworthy: bit-for-bit validation, tests, packaging, CI/CD and documentation. Available for full-time positions from January 2027.

WORK EXPERIENCE

Software Architecture & Scientific Computing Engineer (work-study)

EDF Lab Paris–Saclay · Palaiseau, France

Sept. 2023 – Sept. 2026

- Developed a prototype for nuclear reactor core computation following a more modular, component-oriented paradigm: results rigorously identical to the reference, **bit-for-bit**, up to **12 % faster** and **40 % lower peak memory** (neutronic solvers, C++).
- Built two performance diagnostic tools for this **500k+ line-of-code** platform developed by **30+ engineers**: memory consumption analysis and compute-time measurement (C++, Python bindings); they were used to validate the prototype.
- Automated the test and delivery chain: cluster execution, result checking and storage, release packaging (Jenkins, GitLab CI/CD, XML/XSD, PostgreSQL, Scibian).
- Teamwork: code reviews given and received, leading technical meetings, user support (e.g. a blocking memory blow-up the team had chased for days, identified with the profiling tool).
- Written communication: **5 internal technical notes**, **3 apprenticeship reports** with annual defenses.

C++17 Python PyBind11 CMake PostgreSQL GitLab CI/CD Jenkins Linux Scibian

Graduate Research Fellow — GRO Program

Oak Ridge National Laboratory · Oak Ridge, TN, USA

June – Aug. 2025

- Research stay during the apprenticeship: developed two tools measuring GPU energy consumption for Kokkos, a major scientific computing framework, tested on **Frontier**, the world’s first exascale supercomputer.
- Tools compatible with NVIDIA and AMD GPUs (NVML, ROCm-SMI), preliminary exploration of multi-node simulations (LAMMPS, MPI).
- Two posters presented** (ORNL internal session, Smoky Mountains Conference 2025); invited to present at Supercomputing (SC25), declined due to the apprenticeship schedule.
- Open source contributions: **9 PRs to kokkos-tools and LAMMPS**, **3 merged**, ongoing collaboration with maintainers; analysis tool published as energy-dashboard-for-kokkos.
- Findings presented back at EDF Lab to the group and department group leaders.

Software Engineering Intern

EDF Lab Paris–Saclay · Palaiseau, France

Apr. – June 2022

Fault trees and bow-tie models in Python for nuclear power plant risk analysis; functional prototype intended for internal use.

EDUCATION

Master of Engineering (M.Eng.) — Computer Science & Applied Math

Polytech Paris–Saclay · Université Paris–Saclay, France

Sept. 2023 – Sept. 2026

Work-study program (3 years in industry). CTI-accredited, equivalent to a Bologna-process M.Eng./M.Sc. Scientific computing · HPC · Parallel programming · Software architecture · Networks & security · ML.

Bachelor of Science (B.S.) — Sciences and Technology

Institut Villebon Georges Charpak · Orsay, France

Sept. 2019 – June 2023

PROJECTS

Personal Multi-Server Infrastructure

github.com/ethan-puyaubreau

June 2020 – Present

Designed and operated end to end, solo, since 2020: Proxmox VE virtualization, Kubernetes (K3s) orchestration, Ceph distributed storage, segmented network (VyOS, VLANs), monitoring and CI/CD (GitLab, Ansible). **Around twenty services running continuously** for ~60 regular users.

Proxmox VE Kubernetes Ceph Docker VyOS Ansible GitLab CI/CD

Vireli — Carbon Footprint PWA (team lead)

Polytech Paris–Saclay · industry partnership with Viveris

2025 – 2026

Led a team of six (554 cumulative hours): overall architecture, backend (Hono, Bun, Prisma), deployment infrastructure (Docker, Gitea CI, Coolify, PostgreSQL, Redis). **18/18 functional requirements delivered** and validated.

TypeScript PostgreSQL Docker CI/CD Team lead

Large-Scale Online Event Organization

2021 – Present

Multiplayer events with **150 to 180+ participants**, recognized by specialized press: coordination of a 4–5 person staff, live technical monitoring (Grafana, Prometheus), systematic debriefs.

Coordination Monitoring Communication
